

WEEE Statement for Chiptech Products

08 July 2020

Chiptech designs and manufactures a range of telecare base units and wearable alerting devices to support people to be independent and safe. Please refer to the individual product specification document for the battery information.

Chiptech is committed to meeting the requirements of the **Waste Electrical and Electronic Equipment (WEEE) Directive** which requires manufacturers of electrical and electronic equipment who sell into EU countries to label the equipment for appropriate disposal, and to encourage consumers to recycle the equipment at the end of its lifespan.

Chiptech International is registered through the Environmental Agency small producer compliance scheme <https://www.gov.uk/government/organisations/environmental-agency>

The European Union WEEE Regulations of 2014 state that all electrical and electronic waste must be separately collected for proper treatment and recovery to ensure that WEEE is reused or recycled correctly. Electrical and electronic equipment (EEE) contains materials, components and substances that may be hazardous and present a risk to human health and the environment when it is not handled properly.

End users have a role to play and must dispose of electrical and electronic equipment at a licensed waste carrier to reduce adverse environmental impact, to increase opportunities to reuse, recycle and recover.

The crossed-out wheelie bin symbol indicates that WEEE product should not be discarded together with unseparated waste but must be at a Municipal WEEE collection location.

Please use the links below to find a local licensed waste WEEE carrier.
